March 4, 2005

It has been at least 20 years since I hurt my right knee. I have no idea how I hurt it, but it has been painful. I have walked many miles and some days are better than others.

My Dr. Walter Bortz has urged me to exercise, walk every day, and participate in the exercise program. It was so painful for a long period that I decided to seek some help.

My daughter suggested that I try laser treatment, and I called Christine Miller. My first treatment was painful, and I even experienced spasms in the Dr. Millers office. I limped home and put an ice bag on my knee. The pain was very much improved.

Since my first treatment the pain has bothered me less and less. I began with two appointments per week. My pain has subsided to a degree of such relief. I have begun one appointment per week.

I always look forward to my visits, and my pain has diminished to an extent that I still do my long walks daily. My gratitude to Dr. Miller has given me such a comfort that I am delighted.
